(a) each curve over its own window
grid, 16 × 16, $\sigma_{d_s} = 0.059$
expander, $N = 256$, $\sigma_{d_s} = 0.158$
$d_s(\tau)$
diffusion time τ
(b) window growth, slope $d(\text{span})/d(\log_{10} N)$
cycle (2.00)
irregular grid (0.99)
expander (0.025)
scaling-window span (decades)
$\log_{10} N$
